INTRO

What I am all about.

I like programming and automating things. I love to travel, develop websites and have a keen interest in data science. Check out my [github profile](#) to see some of my work.

I always push boundaries and try to do something innovative and new. This has allowed me to learn various new things and create masterpieces that are unique.

EXPERTISE

Batman would be jealous.

01

ADVANCED CSS

With years of experimentation on CSS, I almost know everything about CSS. This covers from basic styling and positioning to complex animations and transitions. I am also comfortable with CSS frameworks like SCSS and LESS.

02

FRONT-END DESIGN

I believe that design of website has huge impact on user. I focus on enhancing user experience as much as possible. I can design website that range from being minimalistic to having complex animations that tells stories that words can't express.

03

JAVASCRIPT / JQUERY

Javascript is my language of choice. I write modular code which are easy to read and maintain. I am really comfortable with asynchronous languages like javascript. I often tend to use libraries like jquery.

04

ANGULAR

Angular is my goto framework for single page app. I am comfortable with typescript and modular coding that angular uses.

05

NODE JS

I have passion for emerging JavaScript Technologies. I use Node JS in almost all of my server side code. I have also deployed few packages in npm and have noticeable downloads.

06

SQL/MONGO

I have good understanding of the relational database model with implementation techniques along with theoretical background of NoSQL databases. I also have comprehensive knowledge of SQL, various programming languages, and ways to optimize SQL in projects.
